Discussion & Questions in Class

Feb 3, 2014

HTML versus CSS

-organizes→context structures	-appearance of content (presentation)
- tags (enclose elements)	- rules (have styles)
- attribute = " value "	- property: value;
- uses < >	-uses { }

Questions

Can we have HTML code within a CSS file?

NO

Can we have CSS code within an HTML file?

Yes : - inline   < style> </style>

Why is good to keep HTML and CSS separate?

Consistency , how to change?

CSS Syntax Quiz

1) ✗
```
<p> {
    color: red;
}
```

3) ✓
```
p {
    color: red;
}
```

✗
2)
```
p {
    color = red;
}
```

4)
```
p {
    color:  red;
}
```

Which of the rules are correct?

CSS Terminology

Do the terms: *color, border, background*, refer to:

    1) selectors,   P, q, em, li

✓   2) properties,

    3) values,   red, Times, 200px,

    4) tags   <p>

Give some examples for each category.

CSS Properties

Which property was used to style the following paragraph:

<p>Winter is coming.

Winter is coming.

     1) text-color

✓   2) color

     3) font-color

     4) background-color

Using the wrong property names is another source of error.

CSS Values

Why do we use multiple values for the font-family property?

Example

```
 8  em {
 9      font-family: Florence, Parkavenue, cursive;
10      font-size: larger;
11  }
```

Style

Can you list where you have seen the keyword **style**, either alone or as part of a composed word?

1. `<em style="color: red;">` - - ~ `</em>`

2. `<style> { } { }</style>` (HTML `<head>`)

3. `<link href="- — .css" rel=stylesheet>`

4. CSS   border-style,
